58 LEADS ANALYSED

JULY VS AUGUST COMPARISON

OVERVIEW

Month at a Glance

GOOGLE ADS LEADS

21

↑ 50% vs July (14)

COST PER LEAD

\$96

↓ 44% vs July (\$172)

GOOGLE ADS BOOKING
RATE

48%

↓ 16pp vs July (64%)

August delivered **50% more Google Ads leads at 44% lower cost** — driven by a cleaner campaign structure after winding down the underperforming Broad Match test (paused mid-August). But the booking rate declined from **64% to 48%** on Google Ads and from 63% to 47% overall. More volume arrived without a proportional quality filter: insurance mismatches (Medicaid, Cigna, Medicare) and no-response leads account for the majority of non-bookings. HAP status remains unresolved and continues to block leads each week.

August — Weekly Spend & Google Ads Lead Volume

** Aug 30-31 excluded from weekly chart; those 2 days add an estimated \$123 spend and 3 Google Ads leads to the monthly total.*

LEAD QUALITY

Booking Rate by Source Channel

QUALITY SIGNAL

Internal referrals remain the most reliable channel — historically 70%+ booking rate in both months. Psychology Today leads (3 in July, 67% booked) continue to outperform Google Ads on quality. August non-Google sources booked at 46% (17 of 37) — similar to Google Ads' 48%, suggesting a clinic-side capacity factor in the overall booking rate decline.

Why Google Ads Leads Didn't Book

JULY 2026 — 5 NON-BOOKINGS (OF 14 GOOGLE ADS LEADS)			AUGUST 2026 — 11 NON-BOOKINGS (OF 21 GOOGLE ADS LEADS)		
Medicaid / insurance mismatch	60%	3	Insurance mismatch (Medicaid x3, Cigna x2, Medicare x1)		6
No response / didn't answer	20%	1	No response / NCNS / no-show	27%	3
Cost — private pay rate	20%	1	Out of area	9%	1
Medicaid was the dominant blocker in July — all 3 insurance declines were Medicaid-related. Medicaid negative keywords were not yet live in July.			Medicaid negatives added Aug 19 stopped all Medicaid blocks post-Aug 19. Cigna, Medicare, and addiction terms remain unfiltered — next immediate action.		

Three Signals from August

Efficiency Up, Quality Down

CPL dropped 44% (\$172 → \$96) and lead volume grew 50%. But booking rate fell 16 percentage points. More leads at lower cost reflects the winding-down of the Broad Match test — but the quality filter hasn't caught up. Negative keyword coverage and ad copy qualification need to close the gap before October budget decisions are made.

Insurance Exclusions: Still the #1 Blocker

55% of Google Ads non-bookings in August were insurance mismatches — Medicaid ×3, Cigna ×2, Medicare ×1. The Medicaid negatives added Aug 19 worked: zero Medicaid blocks after that date. But Cigna, Medicare, and HAP remain uncovered. HAP has blocked leads in multiple weeks and has been an open action for 4+ months with no resolution.

DSA Call Attribution Gap

DSA recorded 7+ call extension clicks in the Aug 30–Sep 5 week with 0 Google Ads form conversions — the third consecutive week of this pattern. Either call-driven bookings aren't being attributed in the platform (tracking gap), or the calls aren't converting. This needs a conversion tracking audit before DSA's CPL figures are used for budget reallocation decisions.

ACTIONS

September Priorities

CRITICAL · THIS WEEK

01

Add Medicare + Addiction Negatives

Add "medicare", "medicare insurance", "addiction treatment", "substance abuse", "drug rehab" as negatives across both active campaigns. Both triggered unqualified August leads that Medicaid negatives didn't catch. Fast, low-risk fix with immediate impact on lead quality.

CRITICAL · ASAP — OPEN 4+ MONTHS

02

Resolve HAP Insurance Status

HAP has blocked multiple leads across multiple weeks. Open since April 2026 with no resolution. A confirmed yes/no from Wellspring unlocks a patient segment or enables a HAP-specific negative keyword. Every week without an answer is a week of wasted ad spend on a filterable decline reason.

CRITICAL · THIS MONTH

03

Fix Paperwork Completion Drop-Off

35% of leads who schedule a consultation never complete intake paperwork — 283 scheduled vs 184 completed (Dec 2025–Aug 2026). No campaign optimisation recovers revenue lost here. A reminder sequence or simplified paperwork process on Wellspring's side is the fix; this is not an ad problem.

HIGH · THIS MONTH

04

Audit the Booking Rate Decline

Overall booking rate fell from 63% to 47% month-over-month. Insurance mismatches explain part of the drop, but non-Google sources also booked at only 46% in August — suggesting a clinic-side capacity factor. Confirm with Wellspring whether August had fewer available appointment slots before attributing the full decline to ad quality.
